

I wish to express my belief that NAB's petition 04-160 should be rejected. I am a subscriber to XM Radio and listen to broadcast radio as well. XM Radio is providing a valuable safety and public service by broadcasting weather and traffic reports continuously. The broadcast stations do not do this now, in fact the traffic information is often old and not correct this should be investigated and the broadcast stations required to be more timely and required to provide a similar service on a continuous basis.
